A Appendix 1: Publication progress

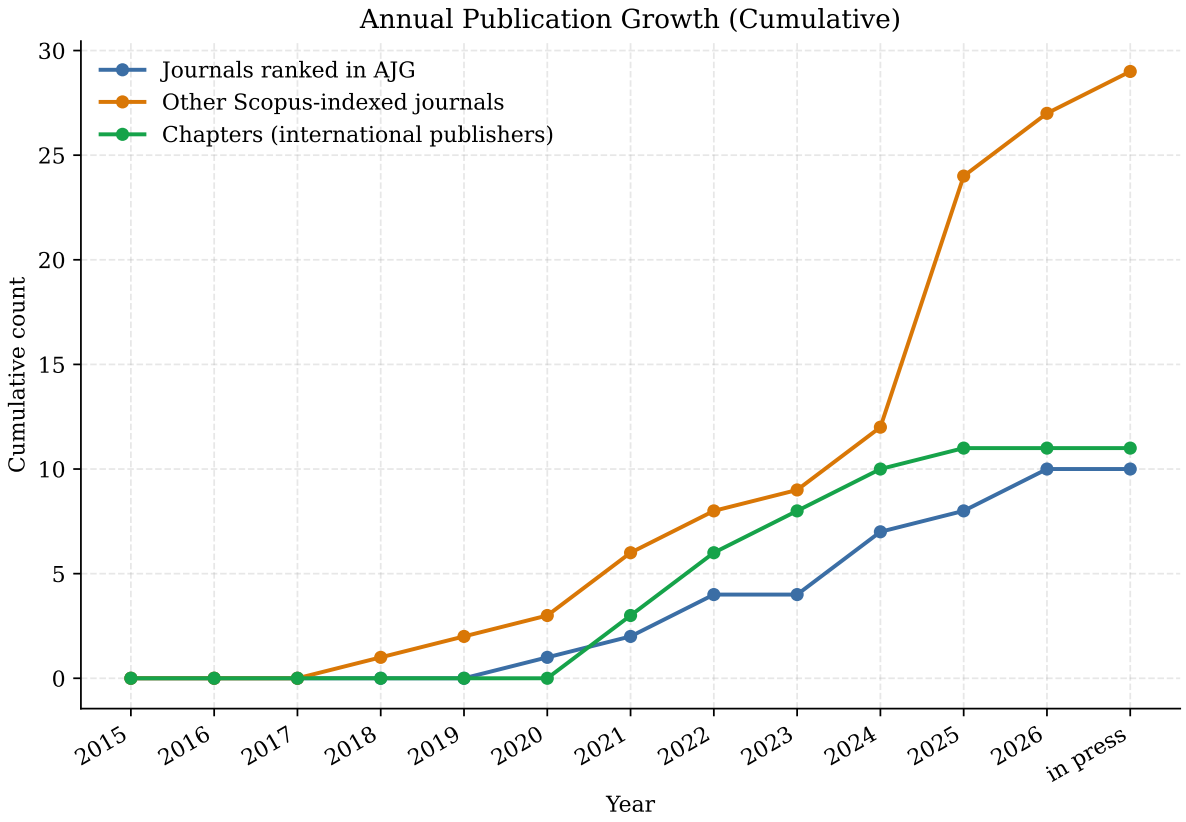

Publication Portfolio and Indexing Breakdown

Snapshot of the 17 categorical counts shown in the publication overview earlier in this CV, in two blocks: publication types (peer-reviewed journal articles 39; pre-PhD articles 37; chapters with international publishers 11; Greek/local chapters 15; conference proceedings 20; presentations 7; theses 2; book editing 2; collected volumes 1; translations 1) and the Scopus indexing breakdown (total 41 including forthcoming, of which 12 Q1, 13 Q2, 7 Q3, 5 Q4).

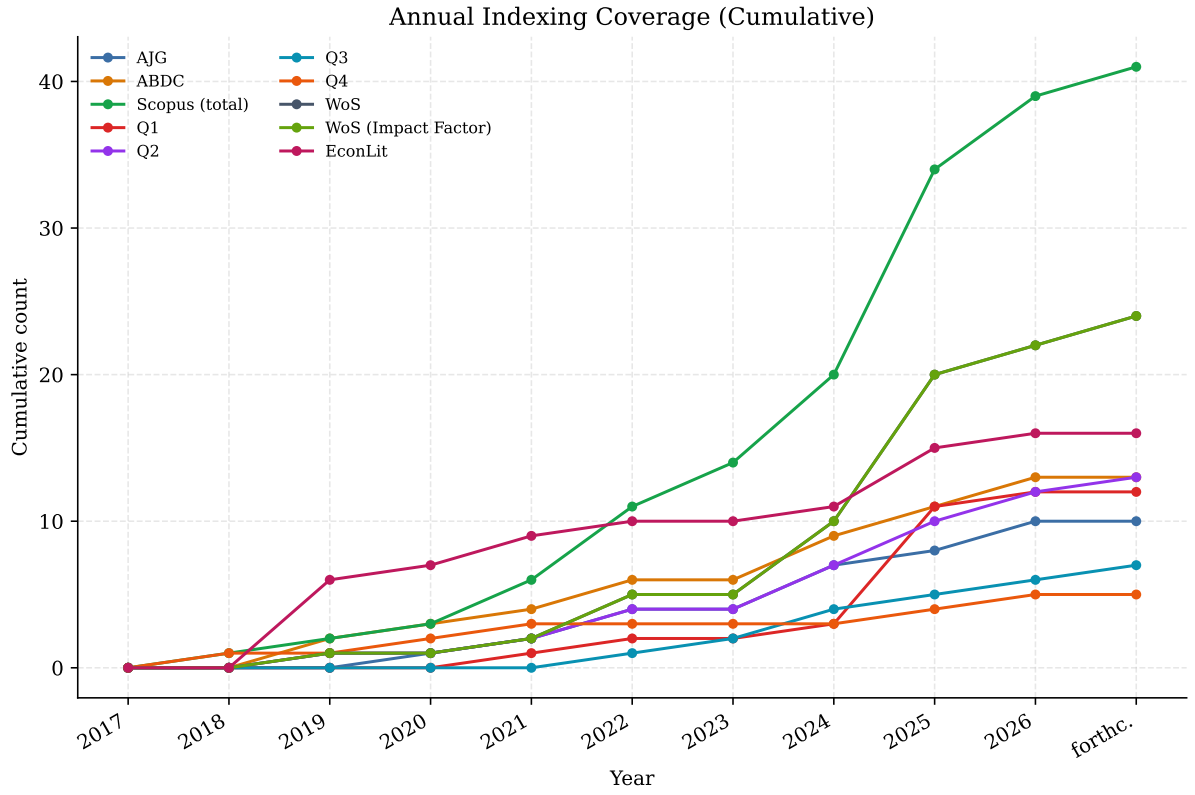

Annual Publication Growth (Cumulative)

Cumulative growth of three publication streams from 2015 to 2026 (plus an in-press queue): AJG-ranked journals rose from zero to ten; Other Scopus-indexed journals from zero to 29; and chapters in edited volumes with international publishers from zero to 11. The 2024–2025 window concentrated the largest year-on-year jumps across all three series.

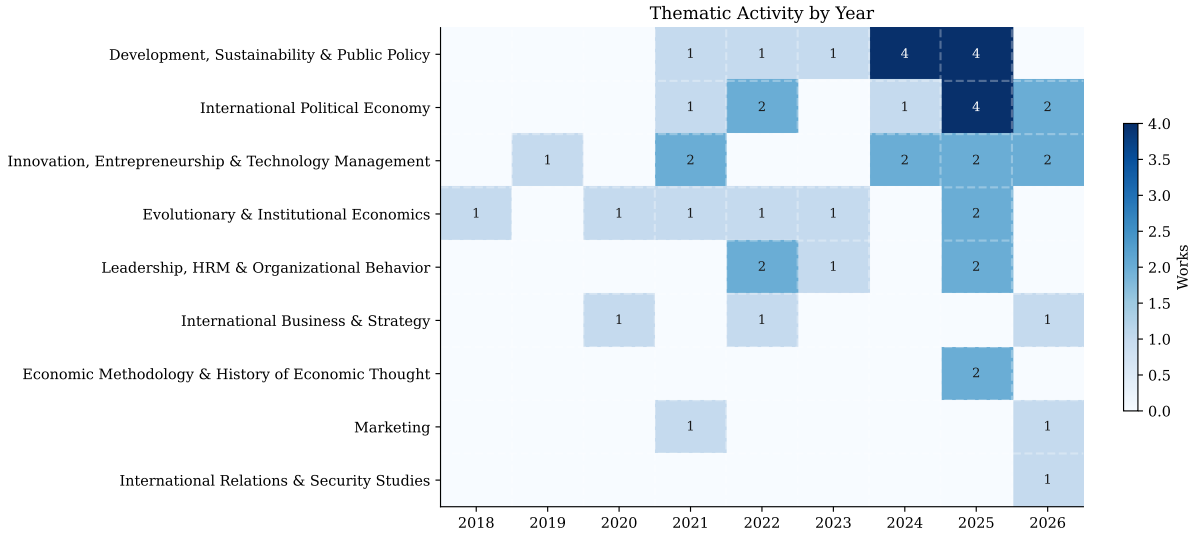

Annual Indexing Coverage (Cumulative)

Cumulative indexing footprint across ten registers from 2017 to 2026 (plus the forthcoming queue). Scopus coverage rose from one entry in 2018 to 41 (including two forthcoming), with the quartile mix at 12 Q1 / 13 Q2 / 7 Q3 / 5 Q4. Web of Science reached 24 indexed articles (including two forthcoming), all carrying an Impact Factor.

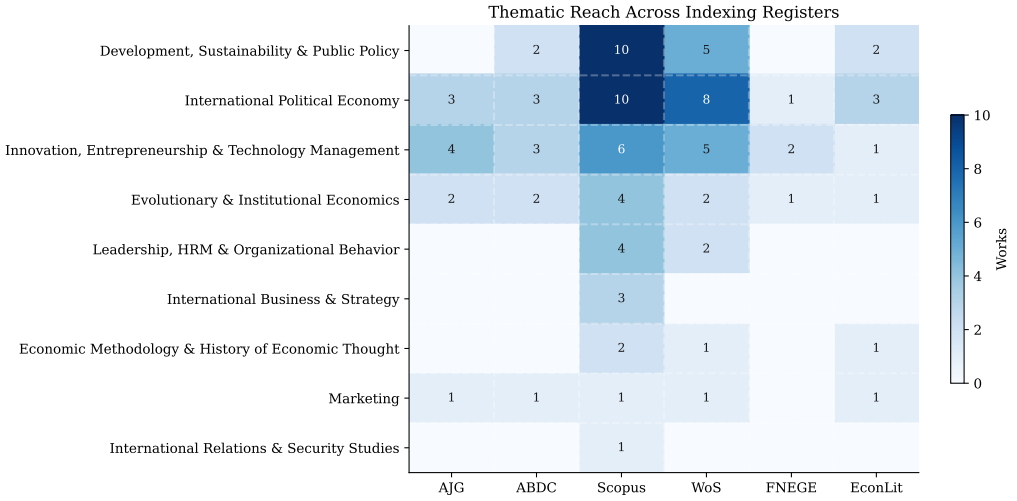

Thematic Activity by Year

Distribution of the 50 peer-reviewed journal articles and chapters in edited volumes by international publishers (published and forthcoming) across the nine active research domains from 2018 to 2026; forthcoming items are placed at their expected year. Darker cells mark the years a domain was most active. The heat concentrates in development–sustainability–energy and international political economy, and the 2024–2025 window is the most productive interval across the entire program.

Thematic Reach Across Indexing Registers

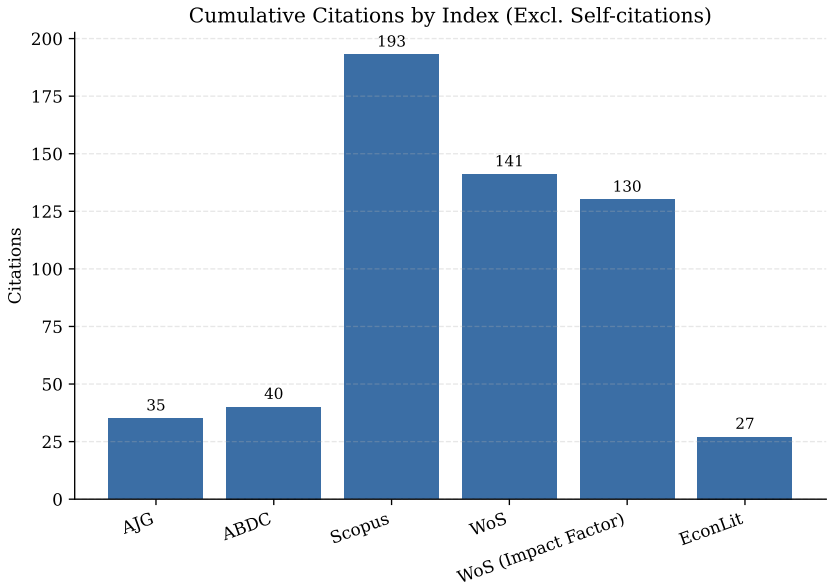

Cross-tabulation of the nine domains against six quality registers — AJG, ABDC, Scopus, Web of Science, FNEGE, and EconLit — over the 50-work program. Darker cells indicate more indexed outputs in a domain. The AJG, Scopus, WoS, and FNEGE column totals equal the full-portfolio figures reported earlier in this CV (10 / 41 / 24 / 4); ABDC (11) and EconLit (9) here are this thematic set's share of the portfolio-wide 13 and 16, the remainder carried by works outside the 50-piece program. The indexed mass is concentrated in development–sustainability, international political economy, and innovation–entrepreneurship.

B Appendix 2: Citation development

Total Indexing in External Citations (Cumulative)

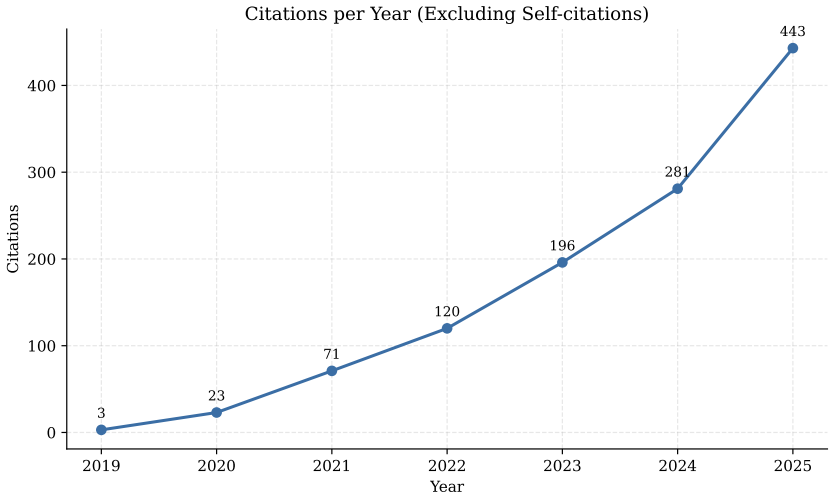

Cumulative external citing events by index as of 10 July 2026: AJG 35, ABDC 40, Scopus 193, WoS 141, WoS-IF carrying sources 130, EconLit 27. The cumulative count of distinct external citations across all sources is 520.[6]

[6]For the complete citation list (Last updated: 10 July 2026), see here.

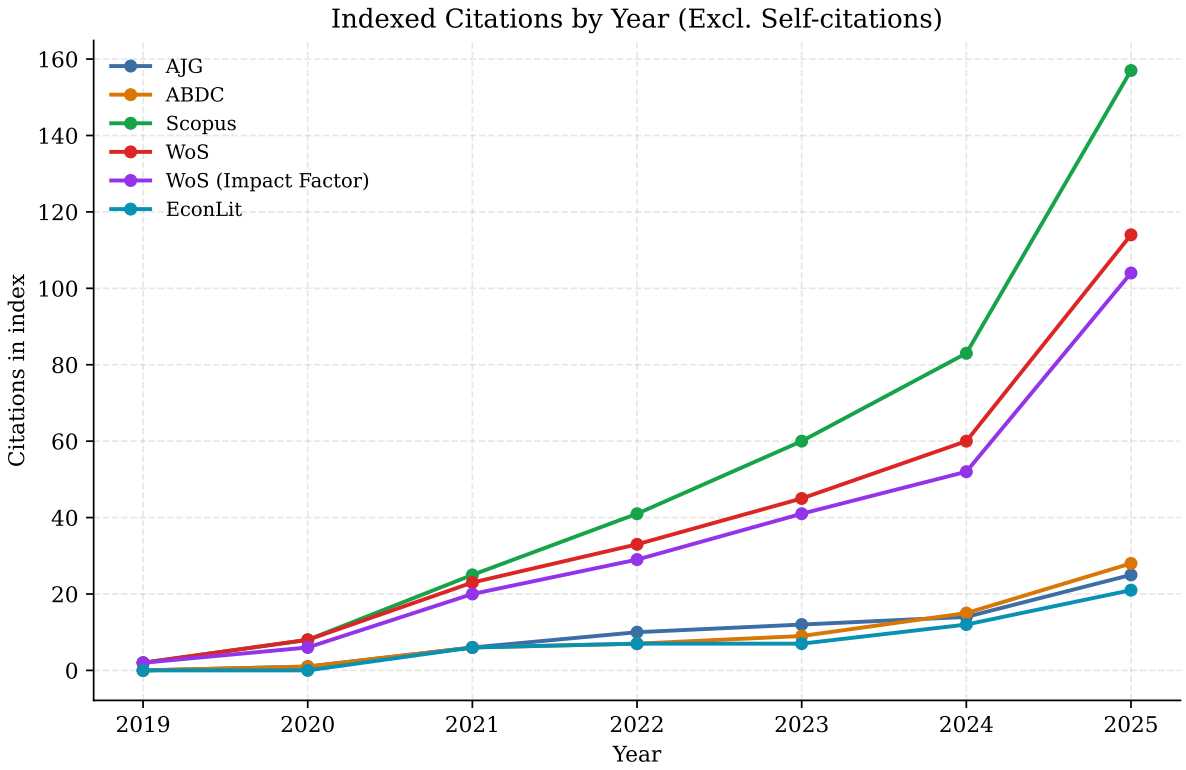

Cumulative External Citations per Year

Cumulative external citations rose from 3 in 2019 to 443 by the end of 2025, reaching 520 to date. The trajectory more than doubled between 2023 and 2025 (196 → 443), with 2025 alone adding 162 new external citations — the largest complete-year increment so far.

Indexing of External Citations per Year (Cumulative)

Index-by-index decomposition of cumulative external citations from 2019 to date: AJG 0 → 35, ABDC 0 → 40, Scopus 2 → 193, WoS 2 → 141, WoS-IF carriers 2 → 130, EconLit 0 → 27. The slope steepened across 2023–2025 in all six registers.

Average WoS Impact Factor of Citing Sources per Year

Annual mean of the WoS Impact Factor of citing sources across the seven complete years 2019–2025. The seven-year average is 3.2, peaking at 4.33 in 2022, with the two most recent complete years at 2.94 (2024) and 3.36 (2025).
